

Middle School & High School Classroom Programs

1) Sensational Senses

- Study the 6 senses of sharks, in comparison to the 5 senses of humans. When it comes to sight, sound, taste, touch, and smell, who is better.... humans or sharks? Then, discover the 6th sense that sharks possess, and learn how it enables them to be a top predator in the sea!

2) Ocean Conservation

- Learn what pollutants are affecting on the world's oceans from garbage and plastics, to chemicals and effluents, and even oil spills. Students will use deductive reasoning and creative thinking to come up with effective ways to clean up our seas and analyze conservation efforts worldwide.

3) Marine Science Careers

- Take a deeper look into career paths and job opportunities within the aquarium and zoo industry, and learn how having a marine science career can have an impact on conservation and wildlife efforts. Learn how Marine Science Careers involve more than just animal husbandry, and how many jobs in an aquarium setting are deeply rooted in education, veterinary medicine, and research efforts.
